

What is claimed is:

1. A user registration supporting system which supports a user, who uses a multi-component product including a plurality of products provided by a plurality of companies, in applying for user registration for the plurality of products, said system comprising:
- 5 a user-information database which stores user information including a plurality of data items and regarding the user;
- a user-information providing section which provides said user-information database with the user information; and
- a to-be-registered information generating section which extracts at least one data
- 10 item required by each of the plurality of companies for the user registration, from the user information stored in said user-information database, and generates to-be-registered information used by each of the plurality of companies for the user registration, and
- wherein said system can generate the to-be-registered information for the plurality of companies at once, based on the user information.
2. The user registration supporting system according to claim 1, further comprising
- a company-information database which stores specification information for specifying the at least one data item required by a plurality of companies for the user
- 5 registration, and
- wherein said to-be-registered information generating section generates the to-be-registered information, based on the specification information of each of the plurality of companies which is stored in said company-information database.
3. The user registration supporting system according to claim 2, wherein further comprising
- a user registration section which registers the to-be-registered information for each of the plurality of companies.

5. The user registration supporting system according to claim 4, wherein:  
said user information includes identification information for identifying the multi-component product used by the user;

said company-information database stores information regarding the plurality of  
5 companies providing the products according to multi-component product; and  
said to-be-registered information generating section specifies the plurality of  
companies providing each of the products used by the user, from the information  
regarding the plurality of companies and stored in said company-information database,  
based on the identification information included in the user information, and generates the  
10 to-be-registered information according to product.

6. The user registration supporting system according to claim 5, wherein:  
each of said plurality of companies is a seller or manufacturer of each of the  
products included in the multi-component product used by the user;

the identification information is information regarding a model name and/or model  
5 number of the multi-component product; and

said to-be-registered information generating section specifies a seller or manufacturer for providing each of the products, from the information regarding the plurality of companies and stored in said company-information database, based on the information regarding the model name and/or model number of the multi-component

10 product.

7. The user registration supporting system according to claim 5, comprising a communications section which is connected, through a network, to a plurality of company terminals used respectively by the plurality of companies providing the plurality

con't

9. The user registration supporting system according to claim 2, wherein:  
the user information is correction information which is formed by correcting the  
user information stored in said user-information database;

10. The user registration supporting system according to claim 2, wherein:  
the user information includes information regarding a product demanded by the  
user;

said to-be-registered information generating section extracts at least one company which can provide the product demanded by the user from said company-information database, based on the information regarding the product demanded by the user, and generates the to-be-registered information based on the specification information of the  
10 extracted company, and wherein said system includes

a communications section which is connected to a plurality of company terminals

used by the respective companies and to the user terminal used by the user through a network, receives the user information from the user terminal, and sends the information regarding the product demanded by the user and the to-be-registered information to a  
 15 company terminal used by the company extracted by said to-be-registered information generating section.

11. A method for supporting a user, who uses a multi-component product including a plurality of products provided by a plurality of companies, in applying for user registration for the plurality of products, said method comprising:

storing user information including a plurality of data items and regarding the user;

5 extracting at least one data item required by each of the plurality of companies for the user registration, from the stored user information, and generating to-be-registered information used by each of the plurality of companies for the user registration, thereby to generate the to-be-registered information for the plurality of companies at once, based on the user information.

12. The method according to claim 11, wherein said generating includes generating the to-be-registered information, based on specification information stored in a company-information database storing specification information for specifying at least one data item required by each of the plurality of companies for user registration.

13. The method according to claim 12, further comprising registering the to-be-registered information for each of the plurality of companies.

14. The method according to claim 12, wherein said generating includes detecting that new user information is stored in a user-information database, and generating to-be-registered information from the new user information.

15. The method according to claim 14, wherein:  
 said user information includes identification information for identifying the multi-component product used by the user;

the company-information database stores information regarding the plurality of

5 companies providing the products according to multi-component product; and

said generating includes

specifying the plurality of companies providing each of the products included  
in the multi-component product used by the user, from the information regarding the  
plurality of companies and stored in the company-information database, based on the  
10 identification information included in the user information, and generating to-be-  
registered information according to product.

16. The method according to claim 15, wherein:

each of the plurality of companies is a seller or manufacturer of each of the products  
included in the multi-component product used by the user;

the identification information is information regarding a model name and/or model  
5 number of the multi-component product; and

said generating includes

specifying a seller or manufacturer for providing each of the products, from  
the information regarding the plurality of companies and stored in the company-  
information database, based on the information regarding the model name and/or model  
10 number of the multi-component product.

17. The method according to claim 15, further comprising

sending the to-be-registered information which is generated by said generating to a  
plurality of company terminals which are used respectively by the plurality of companies  
providing the products, through a network.

18. The method according to claim 17, further comprising receiving the user  
information from a user terminal used by the user through a network, and

wherein said storing includes providing the user-information database with the user  
information which is received by said receiving.

19. The method according to claim 12, wherein:

the user information is correction information which is formed by correcting the
